Small Lifetime Renewable Energy Flashlight

It's the flashlight that never takes a day off! Made with a super bright LED, the Lifetime Renewable Energy Flashlight never has a burned out bulb. And since it can make its' own power, it will never need batteries. Simply shake for light! Features include a rechargeable capacitor, it's water resistant and floats, and it needs no maintenance for a lifetime of use!

Use:

To charge the Lifetime Renewable Energy Flashlight, simply shake the light parallel to the ground with the on/off switch in the off position for about 30 seconds. This will provide about five minutes of usable light. If the light will be used longer than 5 minutes, shake the light for about 15 seconds every 3 minutes or so to maintain a steady light supply

If using the flashlight for the first time, or if it has been a while (1+ month) since the last use, shake the flashlight for approximately 1 minute or about 200 shakes.

Warning

The Lifetime Renewable Energy Flashlight uses very strong magnets which can be harmful or cause damage to medical devices, computers, magnetic storage media, pacemakers, cassette tapes, computer disks, video tapes, televisions, credit cards and especially CRT (Cathode Ray Tube) Displays.

Care of your flashlight:

If the lens gets dirty, clean it with a product designed to clean glass. Warm water and a mild soap can be used to clean the housing. Do not use petroleum distillates or solvents to clean any part of the Flashlight. Avoid dropping flashlight or exposing the flashlight to extreme forces.
